solved MCQs year 2018

Solved mcqs of bt 102 final term 2018

1. **Peripheral proteins----------**

loosely connected and soluble in water

2. **Plasmid--------**

extrachromosomal circular DNA

3. **Mesophils optimum temp. is**

37

4. **Unicellular fungi is**

yeast

5. **Asexual spores are formed by**

mitosis

6. **Mycobiont is---------**

fungi

7. **ELISA is used for**

Antigen and antibody

8. **Western blotting is used for**

proteins

9. **Consistently present but with low incidence**

endemic

10. **Which is not belong to innate immunity**

specific

11. **Which is not lymphocyte**

monocytes

12. **Which is not belong to ELISA**

Probe

13. **Extreme halophiles require high salt concentration**

30%

14. **pH of mold is**

5-6

15. **which do not grow in the presence of o2**

Obligate anaerobes

16. **the process in hot air sterilization is**

oxidation

17. **which is not a method of direct count**

Spectrophotometer

18. **resolution of microscope is**

0.2µm

19. **persisitent infection --------**

Viruses replicate slowly

20. **cell wall is absent in**

mycoplasma

Questions year 2018

1: What are chracteristics of Microaerophiles? 2mks
2: Differentiate between plasmogamy, karyogamy and meiosis? 2
3: Define the terms: Virus, virion and viroid? 2
4: Give three difference of Prokaryotes and Eukaryotes? 3
5: Briefly describe transfomation, conjugation and transduction? 3
6: What is Epidemiology. Describe its methods? 3
7: Name five groups of bacteria for oxygen requirement? 5
8:How bacteria are identify? Give detail of any two methods?5
9: How infectious diseases are transmitted? Explain contact, Vehicle and vactor transmission? 5
10: What is immunity? Explain innate immunity and adaptive immunity in detail? 10mks

1. Define sporulation.

2. Define plasmogamy, karyyogamy and meiosis.

3. Explain Transformation, transduction and conjunction.

4. Define virus,virion and viriods.

5. What is epidemiology disscuss its methods.

6. How diseases get transmitted through contact, vehicles and vectors?
7. Explain medical microbiology.

8. Characteristics of magnetosomes.

9. Discuss in detail microbial identification methods.
10. What is immunity? detail of adaptive and innate immunity 10

What is refractive index. 2 marks
Virus, virisoid, viroid. 2marks
Epidemiology.. 2 marks
Transduction, transformation & conjugation. 3 marks
Types of bacterial identification.. 5 marks
How disease can be transmitted.. 5 marks
Immunity explain innate and adaptive immunity. 10 marks..
Baqi ques yad ni a ry Repeated thy

virus,virions,viriods?transformation,transduction,conjugation?
microbial indentification method?
immunity?
transmits infectious?
diagram for labeling

1.what are flurochromes...
2..virus, viriods, virions..
3..transformation. Transduction.. Conjugation
4.importance of fungi..
5.microbial cntrol
6.advantages of staining..
7.metachromatic granules..
8.vertical n horizontal gene transfer
9.transmissn of infection..
10.immunity.. Innate n adaptive

1 Micribial identifcattion method.
2 innate immunity adaptive immunity.
3 Virus viroid virion.
4 Transmission of microbes

5 Epidemiology and its methods
6 Transduction transmission . Conjugation

passive movemnt (2)
flagellm and function (2)
virus virion and viroid (3)
conjugation, transformation and transduction (3)
how disease can be transmitd (5)
Any two microbial identification method (5)
epidemiology and methods (5) Magnetostome (5)
immunity and its types in detail (10)

1) Function of lipid A in lipopolysaccrides.(2)
2) virus,virons and viroids.(2)
3) briefly write about transformation,conjugation and transduction.(3)
4) Define EPidemiology and their methods.(3)
5) briefly write about pladmogamy,kariogamy n meiosis.(2)
6) Expain Microbial identification methods any two likhny thy.(5)
7) Define immunity and expain adaptive n Innate immunity.(10)
8) how infectious disease can be transmitted explain it briefly transformission occur to contact ,vehicle n vector.(10)

2 marks ques :
1.Glycoclyx, its composition and function
2.Differentiate between vertical and horizontal gene transfer and name three gene transfers
3.virus, virions viroids
3 marks ques:
4.three types of passive movement
5. Economic benefits of fungi
6. Difference between transformation, conjugation and transduction
5 marks ques :
7. Pili and its functions
8. How infectious diseases transfer and explain transfer of infectious diseases by contact, vector and vehicle
9.discuss in detail microbial identification methods
10 marks ques :
10. Define immunity, difference between innate and adaptive immunity in detail

Papers before year 2018

BT102

Define immunity, innate and adaptive immunity in detail (10) Method for microbial control in detal (10) Method of microbial identifications (5) Describe transduction, conjuction transformation (3) Economical use of fungi (3) Characters tics of aerophiles (2) Difference

between vertical and horizontal gene transfer (3) Define pladmogamy, kariogamy and meiosis (3)

What are buffers? How infectious disease can be transmitted explain it briefly transmission occur to contact, vehicle, vector?

BT 102 1. L bacteria3marks 2. Method of microbial identification in details10marks 3. Vertical and horizontal gene tramafer. 3marks 4. Transformation, Transduction and Conjugation 5marks 5. Bacterial gene tranfer vertical, horizontal and transformation, Conjugation and transduction 10 marks 6. Immunity, Innate and adaptive immunity10 marks 7. Epidemiology and its three basic types 5marks

My Today Bt102 Paper How infectious disease can be transmitted explain it briefly transmission occur to contact, vehicle, vector? (10) Write Microbial Identification Methods? (5) Define Immunity and explain adaptive and Innate Immunity? (10) Ecnomical use of fungi? (3) Difference b/w Verticle and Horizontal Gene transfer? (2) Virus, Virons and Viroids? (2) Write composition of alchicacid equation?(2) Something like that asa hi kuch tha exactly yad ni 2 marks ka tha How gene Transfer Transduction, transformation, conjugation explain it? (10) Aur 36 MCQ thy

BT102 (22-08-2017) Total Q 45 36 Mcqs

5 short Q (2 and 3 marks) 1. Define pladmogamy, kariogamy and meiosis, plsamogammy? (3) 2. What is flagellum and write its function? (2) 3. Epidemiology and its three basic types? (2) 4. Virus, Virons and Viroids? (2) 5. Describe transduction, conjuction transformation (3) 4 long Q (5 and 10 marks) 1. How infectious disease can be transmitted explain it briefly transmission occur to contact, vehicle, vector? (5) 2. Method of microbial identifications (5) 3. What are gene transfer in bacteria disscues with transformation, transduction, conjuction? (10) 4. Define immunity, innate and adaptive immunity in detail (10

Bt102

microbiology 2. Method of microbial identification in details10marks 3. Vertical and horizontal gene transfer. 3marks 4. Transformation, Transduction and Conjugation 5marks 5. Bacterial gene tranfer vertical, horizontal and transformation, Conjugation and transduction 10 marks 6. Immunity, Innate and adaptive immunity10 marks 7. Epidemiology and its three basic types 5marks

BT 102 Wednesday at 5am Method of microbial identification in details any two Define gene transfer.By Transformation, Transduction and Conjugation. transfer of infections dieases vehicle vector etc. Define Immunity, Innate and adaptive immunity Epidemiology and its three basic types Virus, viroid, virons. Define sporulation Define meosis,plasmogammy,karyogammy
