BT102 (Microbiology) Final Papers

All Questions Retrieved once to Avoid Doubling. Stay blessed and successful.

2 & 3 Marks:

1. Differentiate between horizontal and vertical gene transfer.
2. Define plasmogamy, kariogamy and meiosis.
3. Define buffers.
4. Define immunity, innate immunity and adaptive immunity.
5. What is epidemiology? Describe its tyes.
6. Enlist microbial identification methods.
7. Write economical uses of fungi.
8. What is sporulation?
9. Differentiate between viable and direct count.
10. What is flagellum? Write its functions.
11. What is meant by gene transfer? Name the types.
12. Describe classification system proposed by Robert H Whittaker.
13. What is taxonomic hierarchy?
14. What is western blotting?
15. Enlist types of passive transport.
16. Name types of spiral bacteria.
17. Define passive movement.
18. What is function of lysozymes?
19. What are fimbriae? Give location and function.
20. Name types of culture on the basis of function.
21. Write functions of cell wass, flagella and ribosomes.
22. What are types of microscopes?
23. What do you know about types of techoic acid?
24. Write characteristics of integral proteins.
25. What are benefits of solid medium?
26. Define refractive index.
27. Define medical microbiology.
28. What is resolution?
29. Write three differences between prokaryotes and eukaryotes.
30. Define virulence.
31. Write methods for viable count of bacterial colonies.
32. Write steps of germination of spores.
33. Write types of lipopolysaccharides.

VU ZOOLOGISTS
Virtual University Department of Zoology
KASHIF WASEEM & MOHSIN RAZA

34. Define culture, media and inoculum.
35. Define antiseptics.
36. Define phosphorylation.
37. Explain phases of growth curve.
38. What is high frequency combination?
39. Differentiate between clone and strain?
40. Differentiate between positive sense and negative sense RNA.
41. What is zoonosis?
42. What are interferons? Give their function.

5 & 10 Marks Questions:

1. Explain characteristics of aerophiles.
2. Describe conjugation, transduction and transformation.
3. Explain methods of microbial control in detail.
4. How infectious diseases are transmitted? Explain in detail.
5. Explain salient features of viruses, virions and viroids.
6. Explain methods of microbial identifications.
7. How fungi can be identified by biochemical testing?
8. Label the diagram of Electron microscope with numbers mentioned.
9. Write functions of cell membrane of bacteria.
10. Write names of 5 types of bacteria with respect to temperature.
11. Write characteristics of metachromatic granules.
12. Explain five kingdom classification systems.
13. Explain layers of endospore.
14. Enlist types of bacteria on the basis of oxygen.
15. Name five types of microscopy.
16. Explain ELISA.
17. Explain types of conidiophores.
18. Explain types of algae.
