BT406 Research Methodology & Skill Enhancement (ALL IN ONE)			
GRAND QUIZ	LAST QUIZ	MIDTERM MCQs	QUIZ-1
QUIZ-2	FINALTERM MCQs	Other PPTs MCQs	31-08-2020
SOJHLA FATIMA			

GRAND QUIZ 44 MCQs PPTs 1-21

1. In research extraneous variables (EV) also known as confounding factors that may affect XY relationships are to be identified by the...? **Researcher**
2. Pretest and post test are performed to measure --Variable. **Moderating**
3. 4-day work week will lead to higher productivity . **moderating variables**
4. The type of non-probability sampling in which the researcher lays down. **Purposive sampling**
5. ----------is also called haphazard or accidental or grab sampling. **Convenience sampling**
6. -------- the is a document that presents a plan for a project to the reviewers for evaluation? **research Proposal**
7. If the relationship among variables refers to an observable reality, the proposition may testable we can then call it a/an? **Hypothesis**
8. Research produces knowledge which can be used? **To solve problem**
9. Which of the following is not a type of observation tool...? **Stratification**
10. -----is essentially a process of describing a phenomenon at increasingly high levels of extraction? **Theory development**
11. Proposition is a statement concern with the...Relationship among concepts? **Logical**
12. A research design includes..? **Experiments, observation techniques, communication analysis, case study, focus group discussions.**
13. The type of non-probability sampling in which the researcher lays down the criteria for the subject is called....? **Purposive sampling**
14. Select the most appropriate.....? **Study of research method provides you the knowledge and skills you need to analysis is a problem and find a solution accordingly.**

15. Following is a type of confounding factors that affects the relationship factors that affects the relationship between X and Y variables and is unknown... ? **extraneous variable**
16. If under aged children are engaged in research, which can provide informed consent on behalf of them...? **Parent or other person with legal standing**
17. ------is a form of social inquiry that focuses on the way people interrupt and make science of the experiences and the world in which they live? **Qualitative research**
18. In order to establish cause and affect relationship between two variables weperform...? **Experiment**
19. Y variable is the dependent variable, variation of which is accounted for by X variable. Do you think the variation in dependent variable could also be caused by factors other than Y variable? **Yes**
20. Strong relationship between the library facility (x) and performance of students depends on the interest and inclination of students which modifies the original relationship in given determine what is the type of variable that modifies the original relationship? **Moderating variable**
21. --------are the two purpose of developing a theory. **Prediction and truth**
22. Statistic is different from statistic in a scene that...? **A statistic is the summary description of given variable in a survey sample.**
23. is a unit about which information is collected and is the basis of analysis? **Element**
24. For exploratory research, the researcher may use different sources for getting information like?(1) experience surveys, (2) secondary data analysis, (3) case studies, and (4) pilot studies
25. Science is a way of knowledge which could be--. **Based only on surveys**
26. The goal of ethics in research is to insure that....? No one is harmed or suffers adverse consequences from research activities
27. The type of relationship in which the nature of relationship is NOT specified is called.....? **Non-directional**
28. Which of the following is an ethical issue in performing lab experiments...? **All of given options**

SOHLA FATIMA

29. are the two purposes of developing a theory? **Prediction and understanding**
30. A day work week will lead to higher productivity (dependent variable) by increasing job satisfaction in this example 4 day work week is a....? **intervening variables**
31. -----is a coherent set of general proposition used as principals of explanations of the apparent relationships of certain observed phenomenon? **Theory**
32. Science is a method to produce knowledge theories, law and principles through...? **The process of observation and re-observation**
33. Interviews, telephone interviews, computer-assisted interviews and interviews through electronic media, questionnaires that personally administered, sent through mail, or electronically administered observation of individuals.... **Data collection**
34. A/an....is the one which can take on an uncountable set of values? **Continuous variable**
35. Pretests and posttests are performed to measure variable during an experiment: **dependent**
36. Science is a way to produce knowledge, which could be...? **Based on truth and probably to be universal**
37. Following is a type of controlling factors that affects the relationship between X and Y variable and is unknown. **Dependent variable**
38. In order to establish a cause and effect relationship between two variable we perform. **Observation**
39. Statistics is different from statistics in a sense that . **c option**
40. Responsible researchers anticipate ethical issues of research. Adjust the design , procedures and protocols.
41. Research produces knowledge which can be used. **To solve a problems**
42. Science is a method to produce knowledge theories laws and principles through. **Observation and re-observation**
43. Science is a way to produce knowledge which could be ----. **Based on truth and probably to be universal**
44. The goal of ethics in research is to ensure that. **No one is harmed from research activities**

LAST QUIZ 93 MCQs 26-08-2020 PPTs 22-38

1- The purpose of field editing is to catch ------- and clarify responses that are logically or conceptually in consistant. Technical omissions
2- The critical thing about ----- measures is that the people being studies are not aware of it but leave evidence of their social behavior or action naturalfly. Non reactive
3- The type of research in which studied subjects are NOT aware that they are part of research project is called --------. Non reactive research
4- Another situation an editor may face is the need to rearrange the answer to an open responses to a question this is called. Editing question answer out of order
5- Qualitative research produces ---- data while quatitative research produces ----- data. Soft , hard
6- Following are steps in the field research except. Enter the field adopt a social role and fight with the members
7- ------ is also called haphazard or accidental or grab sampling. Convenience sampling
8- A trivariate table has a bivariate table of the independent and dependent variablefor each categories of the ----. Control variable
9- When early of the data is not possible ------- is done. In-house editing
10. The ----- is the best known probability sample in which each member of the population has an equal probability of being selected.
11. -------- refers to a body of facts are in a format suitable for decision making whereas ---------- are simply recorded measures of certain phenomenon. Information, data
12. A ------ is a set of rules stating that certain numbers are assigned to variable attributes. Coding procedure
13. Ethical dilemmes of field research in the ------- of a field researcher in the social lives of other people. Direct personal involvement
14. Stratification is usually more efficient statistically than simple random sampling and at worst it is -------- to it. Equal
15. A research method that involves free and spontaneous conversation about a certain issue is called. Focus group discussion
16. ------- refers to information gathered by someone other than the researcher conducting the present study. Secondary data
17. The type of non probability sampling in which the researcher lays down the criteria for the subjects called . purposive sampling
18. Cases and effect relationship can also be contaminated by the effects of the passage of time it is a/an -------. Uncontrollable variable
19. In non probability sampling the probability of any particular element of the population being chosen is --------. Unknown
20. A/an ----- is directly involved with people being studied and personally experiences the process of daily life in the field setting. Field researcher

SOLE FATIMA

21. Ethical committee reviews are important in researches that entail manipulating. Humans
22. The researcher have created numerous ------ and ----- to measure social phenomenon. Scales, indexes
23. Coding the visible surface content in a text is called -------. Manifest coding
24. In the stratification process the variables chosen should increase ------ within each stratum and increase ----- within each stratum and increase between strata. Homogeneity, heterogeneity
25. The ----- contingency table is widely used. These tables are based on cross tabulation. Bivariate
26. Pretests and posttests are performed to measure ------- variable during an experiment. Dependent
27. Pretests and posttests are performed to measure ------- variable during an experiment. Dependent variable
28. ------ is the study of documents through which the writers try to communicate. Content analysis
29. ------ refers to information gathered by someone other than researcher conducting the present study. Secondary data
30. The editor may have to -------- some data. Reconstruct
31. Response of the ------- are measured to the experimental treatments. Test units
32. Network chain referral or reputational sampling is also called -------. Snowball sampling
33. The purpose of data editing is to ensure the -------- of the data. Completeness, consistency and readability
34. There are two basic rules for code construction. First the coding categories should be ------. Second the coding categories should also be -----. Exhaustive , mutually exclusive
35. Field research is more flexible or less structured than ------ research. Quantitative
36. -------- is a form of social inquiry that focuses on the way people interpret and make sense of the experiences and the world in which they live in. Qualitative research
37. The processing of changing data from original form to form that is more suitable to perform data analysis is called --------. Data transformation
38. In some cases the respondent may have answered only the second portion of a two part question this type of editing is called -------. Editing for completeness
39. One-shot Case Study Design is also called ----------. One group posttest only design
40. Researchers combine parts of experiment together into a/an -------. Experimental design
41. In probability sampling every element in the population has a known -------. Non zero probability of selection
42. A/An ----- is measure in which a researcher adds or combines several distinct indicators of a construct into a single score. Index
43. Multistage area sampling is -----. City blocks-house in the blocks-individuals in the house

SHEHLA FATIMA

44. ------- is the ability to generalize experimental findings to real life situations. External validity
45. The purpose of experimental research is to allow the researcher to control the research situation so that casual relationships among ----- may be evaluated. Variables
46. The type of research that entails observation of events in natural setting end the direct involvement of the researcher. Field research
47. Deception and samples are least reliable but ---- and ----- to conduct. Cheapest, easiest
48. Consumer index price CPI is the measure of --------. Inflation
49. A---- is a set of rules stating that certain numbers are assigned to variable attributes. Coding procedure
50. In a survey if answers to some questions are missing but in some cases answer is necessary the editor put in the -------. plug value
51. A ------ is a collection of characters that represent a single type of data ------. Field
52. Following are the factors affecting internet validity except. Chemical loss
53. In ----- the findings from the study of the sample cannot confidently generalized to the population. Random Sampling
54. ----- are most likely to yield a sample that truly represents the population. Random sample
55. Classical experiments design entails pretests and posttests. True
56. In ---- what the researcher is sampling is carefully selected as the researcher develops grounded theory. Theoretical Sampling
57. ------- refers to making interference pertinent to the meaning and implications of the research investigation and drawing conclusion. Interpretation of data
58. What is the appropriate duration of a focused group discussion. 60 and 90 minutes
59. In ------ one experimental group and one control group can be given the both pretest and the posttest and other two group will be given only the posttest. Solomon four group design.
60. -------- categories of a variables is a common data transformation. Combining
61. ------ involves assigning numbers or other symbols to answer so the responses can be grouped. Coding
62. ------- is the process of checking and adjusting the data the data for omission legibility and consistency. Editing
63. Depending upon the type of topic the researcher lays down the criteria for the subjects to be included in the sample this is called. Purposive sampling
64. A common error in the reliability and validity of secondary data is ------. fallacy of misplaced concreteness
65. Some common types of graphic presentations are ------. Histogram, pie chart and bar chart
66. Which of the following is not an ethical issue in performing lab experiments. All of given
67. What are the disadvantages linked to the use of secondary data in research. All of given

68. Stratified random sampling provides the assurance that the sample will accurately reflect the population on the basis of criteria used for ----. Stratification
69. For the presentation of data tables are frequently constructed in research which of the following is not part of tables. Regression
70. The purpose of cluster sampling is to sample economically while retaining the characteristics of a -----. Probability sampling
71. A famous software used for data presentation known as SPSS stand for -------. Statistical Package for the Social Sciences
72. The final stage in the coding process is -------. Data cleaning
73. The stratification in random sampling is done because of the following except. Develop a system for the selection of elements instead of random numbers.
74. Among the following ------ is not a stage in data analysis. Stratification
75. In historical research the various sources of data are following except. Observations
76. Confidentiality and deception are ethical dilemmas associated with---. Field research
77. Quota sampling can be considered as a form of -------. Proportionate stratified sampling
78. Sampling intervals are used in the ----. Systemic Random Sample
79. Researchers read percentage tables to make -------. Comparison
80. Creating non reactive measures follows the logic of ------- measurement. Qualitative
81. When population is heterogeneous the use of ------ may not produce representative sample. Stratified random sample
82. It is difficult to pin down a specific definition of ----- because it is more of an orientation toward research than a fixed set of technique to apply. Non reactive research
83. Which one is not type of non probability sampling. Random sampling
84. Ethical committee reviews are important in researches that entail manipulating. Humans
85. ----- is a form of social inquiry that focuses on the way people interpret and make sense of the experiences and the world in which they live. Qualitative research
86. The critical thing about ----- measures is that the people being studied are not aware of it but leave evidence of their social behavior or action naturally. Non reactive
87. The type of sampling method that begins one/few and spreads out on the basis of links is called. Snowball sampling
88. ----- is the study of documents through which the writers try to communicate. Content analysis
89. The in house editor task is to ensure that inconsistent or contradictory response to ------ Adjusted
90. The type of research that involves comparison of social forms and their development processes across cultures over a period of time is called ------. Historical comparative research

SOLEFATIMA

91. Sequential sampling is similar to purposive sampling with one difference -----. To collect the cases until desired number of sample are collected.
92. ------ is the criterion or standard by which the result are judged. Dependent variable
93. There are no appropriate statistical technique for measuring random sampling error from a----. Non probability sample

MIDTERM PAST MCQS

1- There are mostly ---------- parties in the research. Three
2- Moving up the ladder of abstraction the basic concept becomes abstract ---------- in scope and less measurable. Wider
3- Effect of 2 variables together is likely to be ---------- than the individual effect of each. Greater
4- In resaerch work it is easier to manage ---------- group. Small
5- There are ------- broad steps in conducting survery. Six
6- Students of research methodology must conduct the research by the following the -------- research process. Complete
7- ---------- document that presents a plan for a project to reviewers for evalution. Research proposal
8- --------- estimate the likely consequences of planned change. Impact assessment
9- Every human knowledge is ---------- sciene. Not a
10- There are -------- basic components of theoritical framework. Six
11- The nature of relationship is not specified in ---------. Non directional relationship
12- We are surrounded by the ---------- research. Social
13- Experiments, surveys, content analysis and ---------- are the researchtechnique used in quantitative research. Using existing statistics
14- Methods and ---------- sections are the most critical. Results
15- In ------- researchers read other people research. Review
16- Proposition is a statement concerned with the ---------- relationship among concepts. Logical
17- By repeating the observation researcher wants to be ----------. Positive
18- Parsimony is defined as minimum no of variables that explain --------. Variance
19- ---------- is also called haphazard or accidental or grab sampling . convenience sampling
20- Theoretically there is a ---------- degree of control on the research situations. High
21- -------- is the process of checking and adjusting the data for omissions legically and consistance. Editing
22- ---------- phenomenology is focussed less on the interpretations of the researcher and more on a description of the experiences ofparticipants. Transcendental or psychological

SHAFIA FATIMA

23-The ------- ethnography is a traditional approach used by cultural anthropologists. Realist
24-Researcher read percentage tables to make----------. Comparisons
25-Tables and graphs are--------. Pictorial presentation of data.
26---------- process of changing data from orignal form that is more suitable to perform data analysis. Data transformation
27-------- is a form of social inquiry that focusses on the way people interpret and make sense of the experience and the world in which they live. Qualitative research
28-The intent of the ground theory is ---------. To move beyond description
29-The intent in enthnography is to --------- .determine how the culture work
30-A -------- is a form of narrative study in whichthe resaercher writesand records the experiencesof another person,s life. Biographical study
31)Observation, Repetition, Re-observation (process of sensory experiences)
32)One of the following is not property of independent variable (attendant)
33)A technical term used for UN answered questions on the otherwise complete question is (non response)
34)When the bivariate table suggest Independence of x and y but the relationship appears in one or more parties then it is called (the suppressor variable pattern)
35)Moving up the ladder abstract a basic concept becomes (more abstract)
36)A statement concerned with the logical relationship among concept is called (proposition)
37)Which one of the following is not depicted through review of literature--------
38)Focus group discussion are (6_12 persons assisted by a moderator)
39)In order to get informed consent concerning children (parents to sign)
40)Re-observation, Repetition □□Process of "sensory experiences (Observation)
41)Which of the following is NOT referred to "Sensory experiences (verifiable referred others are not) (Descriptive) Research designed to describe characteristics of the phenomenon understudy. Which is not referred to basic research (payoff)
42)A coherent set of general propositions used as principles of explanation of the apparent relationships of certain observed phenomena (theory)
43)Referred to ethical activities: Violating nondisclosure agreements. (increasing respondent confidentiality).
44)Discussion of an issue by (6-12) persons assisted by a moderator.
45)First step in research process (Starts with a broad area of interest) (Ex-post-facto design) No control over the variables. Report only what has happened or what is happening Divide subjects into 2 or more groups for purposes of comparison in (Experimental and Control groups) First Step in conducting an Experiment is (hypothesis), collecting data, theory
46)Not an unethical Issues in Lab Experiments (Putting pressure on subjects to participate)
47)Unit about which information is collected and is the basis of analysis (element)

48) In case population is heterogeneous, then stratify. Each stratum in itself becomes homogeneous. Researcher's Decision about homogeneity of the population. Is referred to (Stratified Random Sampling)
49) Subject many react differently in an experiment then they would in real life due to ----------
50) With..... Design, investigator have to control over the variable in the sense of being able to manipulation them----------
51) Level of job commitment of the officer with the efficiency is----------
52) What a researcher does not record after locate a source ----------
53) Impact Assessment: Estimate the likely consequences of planned change.
54) ---------- also called haphazard or accidental or grab sampling. Convenience sampling
55) ---------- is a Unit about which information is collected and is the basis of analysis. Element
56) Variables occur in some specified manner without implying that one causes the other. Co-relational hypothesis
57) No control over the variables. Report only what has happened or what is happening. Ex-post-facto design
58) The ---------- pattern: When the bivariate table suggests independence of X and Y but the relationship appears in one or more partials. suppressor variable
59) To gain more confidence, it is advisable to set up 2 expr groups and 2 cont. groups . Solomon 4 Group Design
60) Testing Effect include ----------. Pretests.
61) Heterogeneity with in clusters but homogeneity between clusters ----------. Cluster Sampling:

BT406 Quiz-1 SOLVED

1- There are ---------- broad steps in conducting surveys. Six
2- In --------- researchers read other people's researche. Review
3- Every human knowledge is ---------- science. Not a
4- Theoritically there is ---------- degree of control on the research situation. High
5- Moving up the ladder of abstraction the basic concept becomes more abstract ---------- in scope and less measurable. Wider
6- ---------- is a document that present a plan for project to reviewer of evaluation. Research proposal
7- Students of resaerch methodolgy must conduct the research by following the ---------- research process. Complete
8- Effect of 2 variables together is likely to be ---------- than the individual effect of each. Greater
9- We are surrounded by ---------- research. Social
10- The nature of relationship is not specified in ----------. Non directional relationship
11- ---------- estimate the likely consequences of planned change. Impact assessment

SOLVED BY AFAQ FATIMA

12-There are ---------- the basic components of theoretical framework. Six
13-Methods and ---------- sections are most critical. Results
14-Parsimony is defined as the minimum no of variables that explain ----------. Variance
15-By repeating the observation, researchers want to be ---------. Positive
16-Experments, surveys, ccontent analysis and ---------- are research techniques used in quantitative research. Using existing statistics
17-There are mostly --------- parties in resrarch. Three
18---------- also called haphazard or accidental or grab sampling. Convenience

BT406 Quiz- 2 SOLVED

1- -------- usually mean the researcher's act to find out what people do. Observation
2- ---------- phenomenology is focussed less on the interpretations of the researcher and more on description of the experiences of participients. Transcendental or psychological
3- --------- is form a social inquiry that focusses on the way people interpret aand make sense of the experiences and the word in which they live. Qualitative research
4- The ------- should be written only after the rest of the report is completed. Summary
5- In ---------- the inquirer focuss on the stories told from the individual and arranges three stories in chronological other. Narrative research
6- Which of the following is/are variety / varieties of non- reactive observations. Physical traces
7- Quantative research produced hard data numbers. It follows a ---------- approach to research in which the researcher speaks the language of variables and hypothesis. Postivist
8- The ---------- ethnography is a traditional approach used by cultural enthropologists. Realist
9- A/an --------- is a form of narrative study in which the researcher writes and records the experiences of another person's life. Biographical study
10-The intent in ethnography is to determine ----------. How the culture work
11-Giving bibilography in refreshing is ----------. A must
12---------- research is suited for examining the combination of special factors that produce a specific outcome (e.g civil war). Historical comparative
13-The --------- should be written only after the rest of the report is completed. Summary
14-A distinct historical comparative research method avoids the excesses of ---------. None of given options
15-Regarding the field research and entering the field and establish social relations with members which of the following must be done. All of given options
16-The intent of a grounded theory study is a ---------. All of given options
17-Regarding use of secondary data, which of the following is not an advantage. Bias

18-Researchers read percentage table to make ----------. Comparisons
19---------- is a process of changing data from their orignal form to a format that is more suitable to perform data analysis that will achieve the research objective. Data transformation
20-Tables and graphs are ---------. Pictoral presentation of data.
21-------- is the process of checking and adjusting the data for ommissions, legibility and consistency. Editing

FINAL TERM PAST MCQS

1. Combine several specific pieces of information into a single score or measure. All pieces measure the same construct is ----Uni-dimensionality
2. Presented data have to be interpreted. The interoperation means explain meanings of ----------data
3. ---------- to percentage a bivariate table:by row, column, and for the total. Three ways
4. Ethnography is a qualitative design in which the researcher describes and interprets the shared and learned patterns of values, behaviors, beliefs, and language of a ----------culture-sharing group
5. In step first, researchers determine if a case study approach is appropriate to the ----------research problem
6. --------- interviewing is interviewing with an interview guide Semi-structured
7. Those being studied are not aware that they are part of research project.
8. ---------- also referred to as field research, ethnography, or anthropological study. Observation studies
9. Ethical Dilemmas of Field Research are 1-Confidentiality 2-Deception 3-Involvement of researcher in the social lives of people
10. ---------- is the method of doing historical research or of gathering and analyzing historical evidence. Historiography
11. Max Weber used the German term verstehen -------- "understanding."
12. Sources of historical-comparative research data: 1-Primary sources 2-Secondary sources 3-Running records 4-Recollections
13. A focus group discussion is a group discussion of ------- persons 6-12
14. Duration of ---------- is between one hour to one hour and a half. FGD
15. Procedure that ensures certain characteristics of a population sample will be represented is ----------quota sampling.
16. --------- is a Unit about which information is collected and is the basis of analysis. Element
17. Variables occur in some specified manner without implying that one causes the other. Co-relational hypothesis:
18. ---------- within clusters but homogeneity between clusters. Heterogeneity
19. Non-reactive research includes: .....Largely based on positivist principles, Quantitative.
20. Ethical Dilemmas of Field Research are …….. Confidentiality
21. Sources of historical-comparative research data------ ALL

22. Combine several specific pieces of information into a single score or measure. All pieces measure the same construct is ---------- Uni-dimensionality
23. Presented data have to be interpreted. The interperation means explain meanings of ----------data
24. Three ways to percentage a ---------- by row, column, and for the total. bivariate table:

25. ---------- is a qualitative design in which the researcher describes and interprets the shared and learned patterns of values, behaviors, beliefs, and language of a culture-sharing group Ethnography
26. In step first, researchers determine if a case study approach is appropriate to the ----------research problem
27. Semi-structured interviewing is interviewing with an------- interview guide

28. ----------also referred to as field research, ethnography, or anthropological study. Observation studies
29. Adopt a ---------- learn the ropes, and get along with members. social role,
30. Preexisting versus created roles. ---------- to the roles chosen because of age, race, gender, attractiveness. Limits
31. Also the ----------Complete observer, observer as participant, participant as observer, complete participant. level of involvement
32. ----------is the method of doing historical research or of gathering and analyzing historical evidence. Historiography
33. ---------used the German term verstehen – "understanding." Max Weber
34. A ----------discussion is a group discussion of 6-12 persons focus group
35. Duration of FGD is between one hour to ----------one hour and a half.
36. Procedure that ensures certain characteristics of a ----------will be represented is quota sampling. population sample
37. Element is a Unit about which information is collected and is the basis of ---------- analysis.
38. Variables occur in some specified manner without implying that one causes the other. ----------Co-relational hypothesis:
39. No control over the variables. Report only what has happened or what is happening.---------- Ex-post-facto design
40. Testing Effect include ----------Pretests.
41. Heterogeneity within clusters but ----------between clusters. Homogeneity

FINAL TERM MCQs PPTs 39-48

1. -------- methods Primary or secondary data used. **Data Collection**
2. Tables and charts may serve as points of --------- to the data being

SOLVED BY ALIMA

discussed. **Reference**

3. -------- presents the "too ..." material. **Appendix**
4. Any material that is too technical or too detailed should be in -------. **Appendix.**
5. A ---------- is the listing of the works that are relevant to the topic of research interest arranged in alphabetical order of the last names of authors. **Bibliography**
6. A ------- is a subset of the bibliography. **Reference list**
7. ----- style is usually followed in Management journals / writings. **APA**
8. Use three dots (...) to indicate that you have -------- from the original source. **Omitted material**
9. If the quote is more than 40 words, set it in a free-standing style starting on a new line and indenting the left margin a further -------- spaces. **Five**
10. -------- is a form of social inquiry that focuses on the way people interpret and make sense of the experiences and the world in which they live. **Qualitative research**
11. -------- research, on the other hand, explores descriptive analysis of characteristics through variables or answers questions about the relationships among variables. **Quantitative**
12. Quantitative research studies generally end with a summation of the ---------- process. **Vertification**
13. The aim of qualitative research is ---------. **Discovery**
14. The aim of quantitative research is ----------. **Verification**
15. ------- is understood as a spoken or written text giving an account of an event/action or series of events/actions, chronologically connected". **Narrative**
16. A biographical study is a form of ------- in which the researcher writes and records the experiences of another person's life. **Narrative study**
17. --------- is written and recorded by the individuals who are the subject of the study. **Autobiography**
18. --------- is best for capturing the detailed stories or life experiences of a single life or the lives of a small number of individuals. **Narrative research**
19. A ------- study describes the meaning for several individuals of their lived experiences of a concept or a phenomenon. **Phenomenological**
20. ------- phenomenology describes research as oriented toward lived experience. **Hermeneutical**
21. Phenomenological data analysis steps are generally similar for all ------- phenomenologists. **Psychological**

SOHAIL FATIMA

22. Grounded Theory is an ------ methodology. **inductive**
23. ------ is a systematic methodology in the social sciences involving the construction of theory through the analysis of data. **Grounded Theory**
24. It is the systematic generation of theory from systematic research. **Ground Theory**
25. ------ approach is known as the constructivist grounded theory method. **Charmaz"s**
26. ------ is a qualitative design in which the researcher describes and interprets the shared and learned patterns of values. **Ethnography**
27. ----- involves extended observations of the group, most often through participant observation. **Ethnography**
28. ------ research is the study of an issue explored through one or more cases within a bounded system over time, through detailed. **Case study**
29. Case study research is a type of design in ------- research, or an object of study, as well as a product of the inquiry. **Qualitative**
30. ------ research is multi-model. **Qualitative**
31. Three broad categories of methods and techniques which are mostly used in ----- research. **Qualitative**
32. ------ observation is immersion in a culture. **Participant**
33. ------ observation involves merely watching what is happening and recording events on the spot. **Non-participant**
34. A researcher may simply sit in the corner of a school playground and observe how students behave during breaks, it is an example of --------. **Unobtrusive**.
