

Q.1 A consensus sequence of DNA that has been assembled from overlapping DNA fragments

- A. Primer
 - B. Contig**
 - C. Scaffold
 - D. Adapter
-

Q.2 The short fragments are compared with each other to discover how they

- A. Overlap**
 - B. Read
 - C. React
 - D. Form
-

Q.3 Related species genomes helps in

- A. Guiding the assembly of the target species
 - B. The sequencing approaches and assembly strategies are interdependent
 - C. All**
 - D. Verifying the completeness of the assembly
-

Q.4 If the score is larger than zero, predict it is -----; the higher score, the higher the probability the prediction is true

- A. Receiver/giver
 - B. Donor/acceptor**
-

Q.5 Assembly Pipeline process can be divided into following major phases, except ____.

- A. Scaffolding
 - B. Unitigging**
 - C. Repeat resolution
 - D. Assembling
-

Q.6 ORF are

- A. Open Reading Frame**
 - B. Open recording Fragments
 - C. Proteins
 - D. Online resource formation
-

Q.7 ALLPATHS-LG requires _____ computer operating system.

- A. 32 bit Linux
 - B. 64 bit Linux**
 - C. 32 bit Windows
 - D. 64 bit Windows
-

Q.8 Greedy assemblers can detect ----- and high-scoring ones that are resulted from repetitive sequences

A. True sequence

B. False overlaps

Q.9 ----- are the most common source of Mis-assemblies

A. Repeats

B. DNA Sequence

Q.10 Gene finding, especially in ----- starts form searching for an open reading frames

A. Prokaryotes

B. Eukaryotes

C. Chimpanzee

D. Human
