ZOO404 - Physiology (Quiz no 3)

Quiz Start Time: 09:35 PM, 18 July 2023

Question # 3 of 5 (Start time: 09:36:34 PM, 18 July 2023)

Total Marks: 1

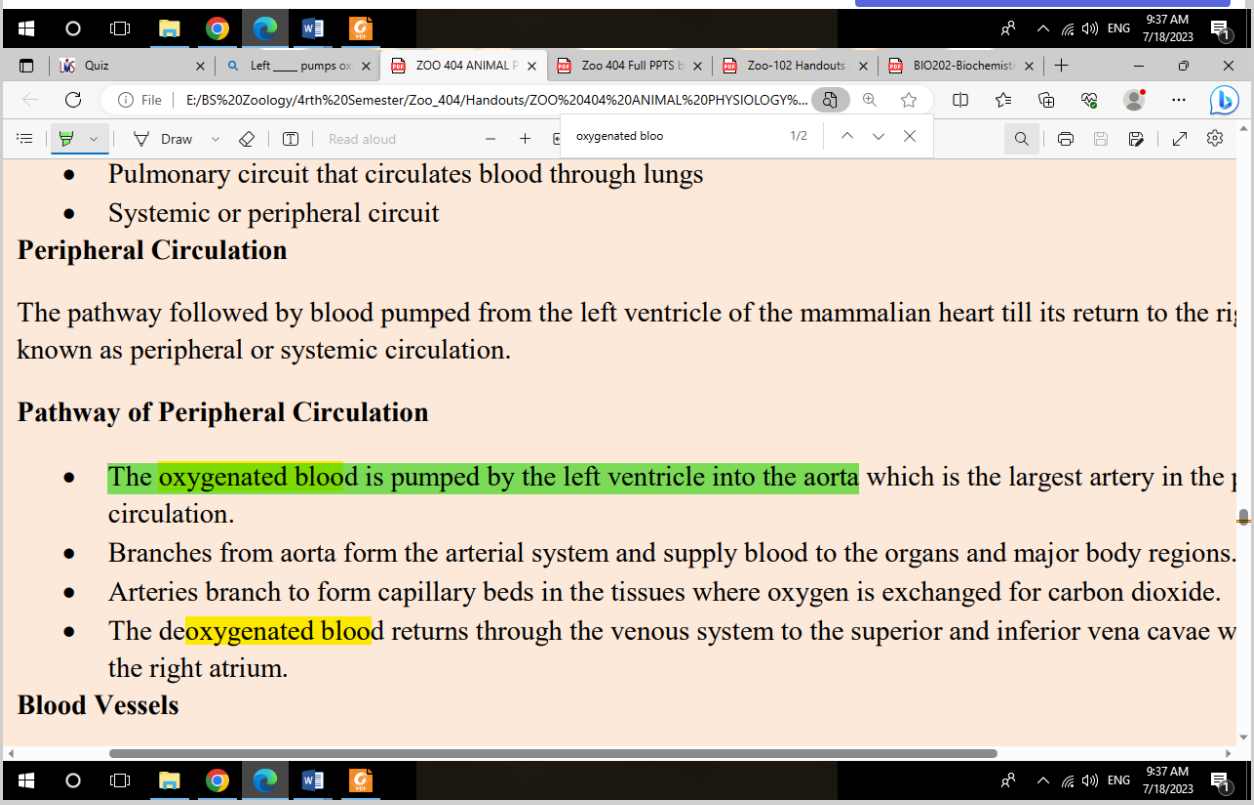

Left _____ pumps oxygenated blood into the aorta.

Select the correct option

- Pulmonary circuit that circulates blood through lungs
- Systemic or peripheral circuit

Peripheral Circulation

The pathway followed by blood pumped from the left ventricle of the mammalian heart till its return to the ri known as peripheral or systemic circulation.

Pathway of Peripheral Circulation

- The oxygenated blood is pumped by the left ventricle into the aorta which is the largest artery in the circulation.
- Branches from aorta form the arterial system and supply blood to the organs and major body regions.
- Arteries branch to form capillary beds in the tissues where oxygen is exchanged for carbon dioxide.
- The deoxygenated blood returns through the venous system to the superior and inferior vena cavae w the right atrium.

Draw | Read aloud | smooth-walled pouc 1/1

The sizes of terminal air spaces become progressively smaller in the order: amphibians, reptiles, and mam
the total number of air spaces per unit volume becomes greater.

Alveoli make the respiratory epithelium of lungs. Respiratory epithelium is thin and well vascularized.

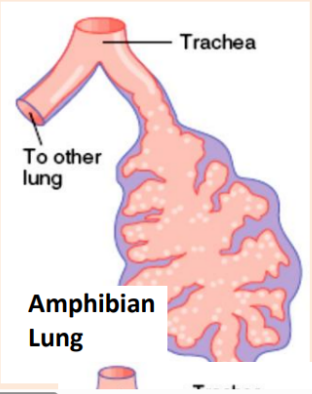

Amphibian Lungs

The structure of amphibian lungs vary in sub-groups.

In some urodeles, it is just like a smooth-walled pouch.

Gas exchange is limited to the outer surface of the lung.

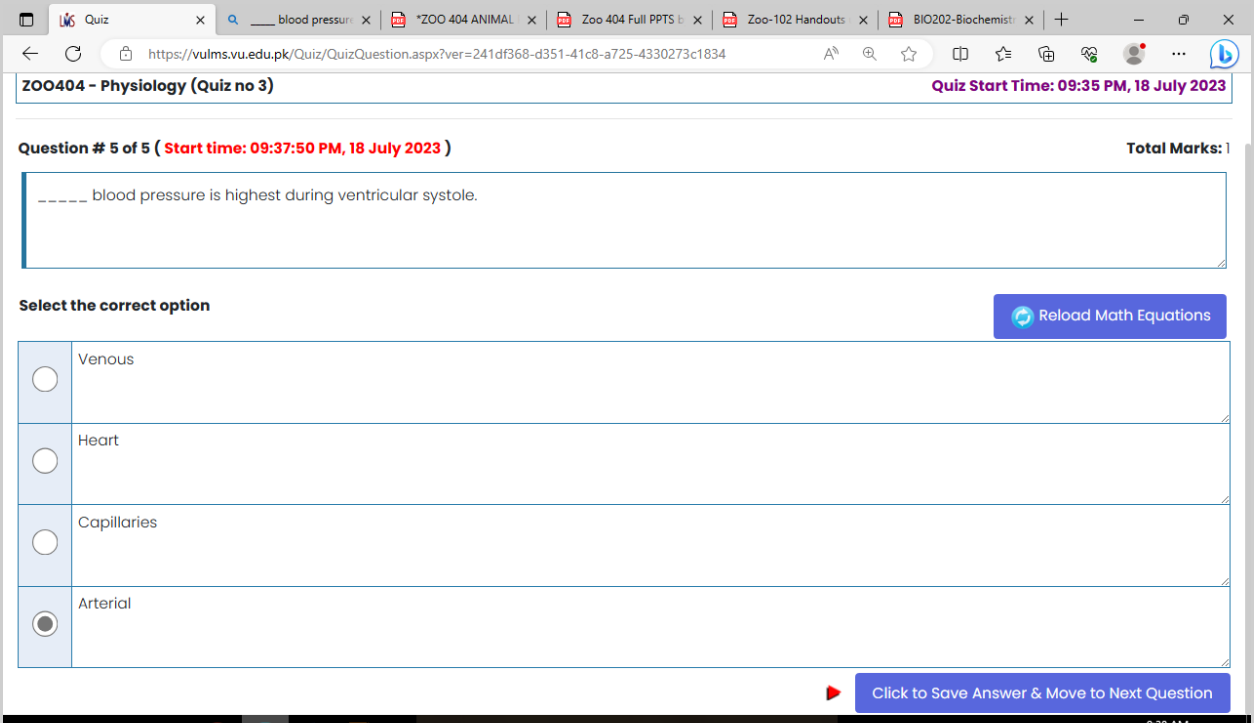

Lungs in frogs and toads are balloon-like which are subdivided by septa numerous interconnected air sacs.
