Alfalfa weevil are not easily dislodged with an insect sweep net and therefore the amount of foliage they consumed and make a damage recommendation observation

- Potato leafhopper, on the other hand, do not chew on the alfalfa leave sap.
- We can not monitor their damage, nor are they easily counted on alfal are small and easily fly when disturbed
- Instead, we must use and insect sweep net and count the number of a caught
- For second generation corn borers one sweet corn, we count the numl leaves
- Different pests require different scouting practices

Benefits of an IPM Program

- Protects environment through elimination of unnecessary pesticide ap
- Improves Profitability
- Reduces risk of crop loss by a pest
- Peace of Mind

Disadvantages of an IPM Program

- Requires a high degree of management
- More labor intensive
- Success can be weather dependent

111 Pests of Cotton

- Cotton is a soft, fluffy staple fiber that grows in boll, or protective
- Cotton (*Gossypium spp),* the king of fibers, usually *commercial referre* one of the important commercial crops, plays a pivotal role in human c political and social affairs of world.
- The four cultivated species of cotton viz. *Gossypium arboretum, Goss hirsutum and G. barbadense belong to Malvaceace family*
- The plant is a shrub native to tropical and subtropical regions around t the Americas, Africa, and India
