ZOO510 ECONOMIC ZOOLOGY

FINAL TERM

OBJECTIVE

1.Fire ants consume-----eggs. ticks

2.--- plague is still present in some rodent populations today, even here in the United States. bubonic

3.Ruminants have compartments in stomach ----4

4.---- required for bone formation, egg production, reproduction & prevention of rickets. Vit.D

5.---- essential to prevent encephalomalacia or crazy chick disease. Vit.E

6.Def. of vit. K delay clotting time of the blood & produce serious hemorrhage.

7.Animal proteins are good sources of---- vit.B12

8.Feed conversion of broilers---- = 2.2

9.---- is the most common grain used in formulating poultry diets. CORN

10.Animal & vegetable fats added in limited amounts---- (5-10% of the diet)

10.Most common plat protein is---- soybean

11.-----used in grower poultry ration to replace up to 50% of the soybean meal. Cottonseed med

12.--- meal have a good balance of AAs. fish

13.Commercial feeds for poultry---- as mash, pellets or crumbles.

14.Laying hen receiving diet containing 3.1 Mcal ME/kg DM require 16.5% protein.

15.----- is first limiting AAs for egg production. Methionine

16. Mash for laying hens should contain not less than 3-4% animal protein supplement.

17.Feathers are high in ----- Sulphur amino acid

18.Lying birds need large amount of ---- ca

19.Bird stored Ca for about ----before the first egg was laid in the marrow of long bone. 10-14 days

20.Inorganic P is more available than phytate P.

21.For feeding of laying hens 0.5-1% of the total ration salt

22.Lying hens require higher content of vitmin a

23. Period after 42W of age when the hens attained mature body weight

24.The period ranged from 42-72W of age.

25.Def. of vit.B2 slight yellowish-green tinge in albumin

26.Eggs production hens cover period ----15 months

27.Foul pox ---- viral disease

28.A female calve weight at birth ----40kg

29.Calve reaches puberty at---- 1 year

30.Oestrous cycle in cow ----21 days last 18 days.

31.The gestation period of cow is--- 283 days 9.5 months

32.The milk yield of cow depends on--- bread

33.Holstein yield milk----- 5800kg per year

34.The ideal milking interval is -----12 hours

35.The milk ---- cow has highest butter and snf content. jersey cow

36.Milk contain fat ---1%

37.The land requires for beef farming----1.5 acres

38.Palatability refers to how well the animal will accept feed.

39.Monogastric animals---- pig dogs humans

40.Polygastric animals ----- cow sheep goat

41.Pseudo ruminant---- horse rabbits, hamsters

42.The process by which animals eat and use food --- nutrition.

43.Salt calcium sulfur ----macronutrient.

44.Cobalt copper iodine iron ----micronutrient.

45.Types of digestion system--- three

46.Avian – has a crop & gizzard

47.Chemical and mechanical breakdown of the food ---digestion.

48.Water makes animals body weight----75%

49.Carbohydrates in animals' diet---- 75%

50.Fats has more energy than carbohydrates--- 2.25

51.Essential amino acids----10

52.Types of vitamins…2

53.Fat soluble vit----- A,D,E,K

54.Water soluble vit--- c and b

55.Crops used for silage --- corn, legumes

56.Trace minerals ---cu zn sc

57.Vit found in green plants--- A

58.Vit found in grains---- E

59.Type of pathogens--- 2 mechanical biological

60.Mosquitos belong to order--- Diptera

61.The phylum Arthropoda have distinct groups --- 4

62.The largest phylum in animals' kingdom---- Arthropoda

63.Arthropoda have species--- 1 million

64.Class crustacea include--- lobster, crabs

65.Microscope made by--- Leeuwenhoek, 1700s

66.Ticks are pool feeders.
