

(03 Marks) Questions

Q. Two difference of central, FRONT and backward design.

Forward design	Central design	Backward design
Forward design starts with syllabus planning, moves to methodology, and is followed by assessment of learning outcomes. Resolving issues of syllabus content and sequencing are essential starting points with forward design, which has been the major tradition in language curriculum development.	Central design begins with classroom processes and methodology. Issues of syllabus and learning outcomes are not specified in detail in advance and are addressed as the curriculum is implemented. Many of the innovative methods of the 1980s and 90s reflect central design.	Backward design starts from a specification of learning outcomes and decisions on methodology and syllabus are developed from the learning outcomes.

Q. Define frame, 2-3 lines

One useful concept with which to examine role relations suggested by materials is Bernstein's (2004) notion of a 'frame'. It refers to the actual relationship between teachers and pupils and the range of choices which they have over what is done between them. Thus a strong frame will 'reduce the power of the pupil over what, when and how he receives his knowledge'.

Q. Role Internet based learning in lessons

The internet as a resource can enrich and expand language instruction. There are numerous reasons in favor of integrating the Internet into a language curriculum.

Chun and Plass (2000) mention general capabilities of features of the WWW that have the potential to enhance language learning. These are a) the universal availability of authentic materials, b) the communication capabilities through networking, c) the multimedia capabilities, and d) the nonlinear (hypermedia) structure of the information. The most compelling reason is definitely the convenience in accessing and obtaining an endless supply of authentic materials in target languages. The WWW has brought the world to the fingertips of each learner. Applying the WWW to foreign language teaching also provides the opportunity to meet the standards in several ways (Walz, 1998): "Competence in more than one language and culture enables people to gain access to additional bodies of knowledge; ... all students learn in a variety of ways and

settings; ... language and culture education incorporate effective technologies; and using the web is consistent with learning theories about learning to read authentic materials".

Q. Two disadvantages of written tests

One of the disadvantages of written tests compared with oral ones is that students complain about the results of written tests far more and often ask for another go. In written tests, students tend to cheat a lot and have warped results because of the pressure of the situation. It's fairly rare that someone in the school can find time to watch a student take the test so the student is likely to sneak a look at the dictionary or ask a friend for help. Sometimes students don't understand the instructions but this only becomes evident later when the marker notices how badly they messed things up.

Q. Approaches of language learning evaluation

There are many approaches for language program evaluation:

- ❖ **Product oriented:** This approach focuses on the goals and objectives of a curriculum that match with the instruction objectives.
- ❖ **Process oriented:** It deals with the LCD change, innovation and improvement in implementing the curriculum.
- ❖ **Static characteristic:** It deals with looking at the perspective of external agency. It looks at the institute in terms of its overall standing and ranking.
- ❖ **Decision facilitation:** It is a cyclic process that continuously gathers information about needs, environment and situation analysis.

These approaches lay emphasis on becoming aware of parameters of accessing worth of a language program.

Q. Tailoring the Evaluation to Fit the Context, write in 2-3 lines

Tailoring the evaluation process is not an easy task. It requires certain principles that an evaluator should know. A typical evaluation exercise is to take decision about tools which can be used for the process like questionnaire, interview sample or textual analysis. It is important to know about the evaluator (teacher, administrator or some external agent).

Q. Define purposes of evaluation OR Q. Accountability in Language Program Evaluation.

Weir and Roberts (1994) distinguish between two major purposes for language program evaluation; one is program accountability and other one is program development. Accountability refers to the extent to which those involved in a program are answerable for the quality of their work. Accountability-oriented evaluation usually examines the effects of a program or project at significant end points of an educational cycle and is usually conducted for the benefit of an external audience or decision maker. On the other hand development-oriented evaluation is

designed to improve the quality of a program as it is being implemented. It may involve staffs who are involved in the program as well as others who are not and may have a teacherdevelopment focus (Weir and Roberts 1994). The different purposes for evaluation are referred to us: formative, illuminative, and summative evaluation.

Q. Disadvantages of negotiated syllabus

The disadvantages of a negotiated syllabus are of two major types. The first is the result of a lack of knowledge or experience with such a syllabus. Learners may be reluctant to negotiate or to let their classmates negotiate because they feel it should be the teacher's expertise guiding the course. Gradual introduction of a negotiated syllabus can provide learner training to help overcome this problem. Learners may also not know enough of the range of options they could choose from and thus may make unimaginative choices. Teachers may feel that using a negotiated syllabus removes too much of their power and status. Learners may find it difficult to reach agreement about what they should be doing. The second major disadvantage is that a fully negotiated syllabus requires considerable teacher skill and time in accessing and producing resources. Where there are several teachers with similar classes, this load can be partly shared.

Q. How can enhance the language learning ability through www.

- a) the universal availability of authentic materials,
- b) the communication capabilities through networking,
- c) the multimedia capabilities, and
- d) The nonlinear (hypermedia) structure of the information.

Q. story line solution

The second approach that is used to sequence the activities of a unit is a storyline situation. If the students are unable to identify strongly with the characters or the emotions, then it is important to use creative exploitation techniques or role-play exercises

Q. rational of sutructed syllabus

- ❖ The first argument is that it is well established and it is informed by a long tradition of linguistic analysis.
- ❖ The second major justification for the formal syllabus is that it presents learners with a subject matter which is systematic and rule-governed. When we learn something new, we can begin to see patterns and regularities within it and that will reduce the 'learning load' it (i.e. new learning) demands of us.
- ❖ A third justification for the formal syllabus is that because the linguistic system is analysable in certain ways, these analytical categories or schemas can be incorporated in a plan for teaching the system, and further it may be that the same analytical categories or schemas make it easier for the learner to uncover how the new language works.

Q. types of situational syllabus

- ❖ **Limbo Situation:** In this type, the information of the specific setting is of little importance, for example, the topic of introducing someone at the setting of a dialogue taking place at the stadium. It can be said that the setting is considered irrelevant, i.e. unimportant, because the main important thing is the language focus.
- ❖ **Concrete Situation:** The information is about the specific and concrete setting and the language associated with it, for example, the topic of ordering a meal at a restaurant.
- ❖ **Mythical Situation:** The information depends on fictional story line, frequently with a fictional cast characters in a fictional place..

Q. The type and focus of evaluation

A distinction is made between formative evaluation and summative evaluation. A summative evaluation has the purpose of making a summary or judgement on the quality or adequacy of the course so that it can be compared with other courses, with previous summative evaluations, or judged as being up to a certain criterion or not. The formative/summative distinction is important when informing the people who are the focus of an evaluation about the purpose of the evaluation, in helping the evaluator decide what kind of information will be most useful to gather, and in using the information gathered. Stenhouse (1975) stressed the importance of “illuminative evaluation” where evaluation helps those involved understand what is going on in the programme, and this necessarily requires teachers to be active programme evaluators. An evaluation can focus on the process of learning and teaching and it can focus on the product or result of learning and teaching. It is better to have a small amount of relevant data than a large amount of data that do not address the main concerns of the evaluation.

Q. Dimensions of language program.

- ❖ **Formative vs summative:** Given throughout the learning process, formative assessments seek to determine how students are progressing through a certain learning goal. Given at the end of the year or unit, summative assessments assess a student's mastery of a topic after instruction.
- ❖ **Process vs product:** Product deals with the goals of the course achieved. On the other hand, process deals with how the goals are achieved. The dynamics or methodologies are involved in achieving these goals.
- ❖ **Quantitative vs qualitative:** Quantitative deals with the collection of descriptive data with the help of some questionnaires or textual analysis. Qualitative evaluation, on the contrary, deals with the general observation.

Q. discuss two approaches for language program in detail.

- 1) **Product oriented:** This approach focuses on the goals and objectives of a curriculum that match with the instruction objectives.

- 2) **Process oriented:** It deals with the LCD change, innovation and improvement in implementing the curriculum.
- 3) **Static characteristic:** It deals with looking at the perspective of external agency. It looks at the institute in terms of its overall standing and ranking.
- 4) **Decision facilitation:** It is a cyclic process that continuously gathers information about needs, environment and situation analysis.

Q. In order to design material, the designer has to consider.

- ❖ Developing aims
- ❖ Developing objectives
- ❖ Developing a syllabus
- ❖ Organizing the course into units
- ❖ Developing a structure for units
- ❖ Sequencing units

Q. characteristics of hidden curriculum.

- (1) What are actually revealed in the hidden curriculum “are all unintended, not part of any teacher’s objectives” and
- (2) “they all tend to be what one might call ‘social’ learning, about what people expect of you, and how you can best cope with their demands

Q. possible weaknesses of Morduch's Model.

Principles, monitoring and assessment, and evaluation are not included in Murdoch’s Model (2010). These are possible weaknesses of his model.

Q. Two things, material designers are interested.

- 1) What sort of activities are likely to promote effective performance and learning in language classroom?
- 2) How such activities might be constrained or elaborated, and organized in terms of a plausible course?

Q. 3 phases of task.

- ❖ Task as a work plan allows the teachers to make some ground work to know some of the preconceptions and past learning experiences of the students. It gives an opportunity to see what students want in the classroom.
- ❖ Task in process creates the relationship between teacher and student during the processing of task.
- ❖ Task outcomes help to analyse what has already been learnt.

Q. 3 scales for describing the size of change in course design as suggested Stoller.

Stoller suggests six scales for describing the size of the change, the best size being in the middle area of each scale. The scales are explicitness, visibility, originality, compatibility with past practices, difficulty/complexity and flexibility.

Q. How teachers convey socially-approved knowledge?

Teachers convey “socially-approved knowledge” unconsciously or without intending it while he/she is teaching what is required by the official curriculum. Here, socially-approved knowledge could indicate social-moral habits, attitudes, informal school rules and beliefs. For example, we often find that teachers teach obedience, conscientiousness, regularity, punctuality, gender identity, and even political awareness. These personal characteristics, attitudes, and social behavior are taught indirectly in school because the school timetable does not have lessons called ‘obedience’ or ‘conformity’.

Q. Experiential practices and awareness-raising practices.

Ellis (1986) distinguishes between experiential practices for teacher training and awareness-raising practices for teacher training. Experiential practices involve actual teaching, either real or simulated. Awareness-raising practices involve conscious understanding of principles, techniques and issues. The goals of gaining teaching experience and developing a conscious awareness of teaching options can be achieved in the same teacher training activity.

Q. Diagnostic assessment

Diagnostic assessment is used to find the gaps and weaknesses in learners’ knowledge so that something can be done about them. More positively, it is used to find what learners know well so that time is not wasted on teaching that. Diagnostic assessment is thus a very important part of needs analysis, both before a course begins and during the course. The findings of diagnostic assessment are used to determine what goes into a course. So good diagnostic assessment is accurate and easy to interpret in terms of what should be done as a result. Diagnostic information can often be obtained from assessment intended for other purposes, such as proficiency tests, achievement tests or placement tests. However, there are tests designed especially for diagnosis.

Q. Perspectives behind English as language of International Communication in Pakistan.

In the current scenario, English is the language of international communication, higher learning and better career options. It should, therefore, reach the masses so that there is no discrimination amongst the rich and poor in Pakistan in terms of opportunities for personal, professional and economic development. With this perspective, teaching of English has been introduced as a language from grade one and would be used as a medium of instruction across the curriculum for various subjects (2006).

Q. Coherence in designing Course Units.

Coherence is a systematic approach to aligning and sequencing specific ideas and the depth to which those ideas are examined, in order to help the development integrated understanding in learners.

Coherence among course units while designing material is very important. Designing a balance between units is not straightforward; however, it is a blend of imagination, insight, understanding and analytical reasoning. A material designer has to be very critical and practical while designing material for a language course. Coherence among course units ensures more involvement of the students. A coherent curriculum should build ideas across time and disciplines by connecting ideas between relevant topics and by aligning the development of instructional materials, instruction, and assessment.

Q. Need Analysis in teaching.

Teachers themselves are very good sources of needs analysis information because they typically know their learners well, have seen them perform various tasks and have seen the results of those tasks. Teachers' intuitions can be reliable, valid and practical. It is always good in research and in needs analysis however to draw on more than one source of information.

There are now many web-based tools that can be used in needs analysis. It is now possible to run texts through a vocabulary-level checker to see what the vocabulary load is going to be. A very good example of this can be found on Tom Cobb's website (www.lex tutor.ca); on the same website there are various tests that can be used to measure where learners are in their vocabulary knowledge.

It is important that teachers keep checking their own intuitions of learners' language knowledge against the results of tests and careful observation of the learners using language.

Q. Placement Assessment.

Placement assessment is used to decide what level of the course a learner should enter, what class the learner should join, and whether the learner should join the course at all. Placement assessment usually occurs under environment constraints. It often has to be done just before a course begins. The results have to be available quickly. The learners are largely unknown and may be confused about the course they wish to do. The learners may not perform their best on a placement test because they are unfamiliar with some of the test formats, because their knowledge of the language is "rusty" through lack of opportunity to use it, or because they are anxious about the test. The assessment may be the learners' first meeting with the teachers and course and could affect their attitudes to the course. The time available for assessment may be limited. The assessment needs to be reasonably accurate because it often proves difficult to move learners to other groups once they have joined a group. This means that placement assessment needs to be:

- (1) familiar, friendly and relaxed,
- (2) reasonably brief and easy to mark and interpret, and
- (3) focused on gathering the most relevant information.

Q. Drawbacks of Content Based Syllabus.

- ❖ Ellis (2003) believes that content-based courses might not result in learners achieving high levels of grammatical and sociolinguistic accuracy.
- ❖ Brown (2007) argues that teachers can be easily deterred by the demands of content knowledge and discouraged by the amount of preparation they must do. Furthermore, they do not feel that they are qualified to teach content area.
- ❖ Short (1993) mentions that the difficulty with assessment centres on isolating the language features from the content objectives in order that one do not adversely influence the other.

Q. Essential characteristics of Behaviour Objectives.

- ❖ They must unambiguously describe the behaviour to be performed.
- ❖ They must describe the conditions under which the performance will be expected to occur.
- ❖ They must state a standard of acceptable performance (the criterion).

Q. Forward Design Curriculum.

In some contexts the planning and development of each stage in the curriculum development process is carried out by different specialists who have expertise in each process, such as specialists in syllabus design, methodology and assessment. Graves (2008) describes this as a 'specialist approach'. In the specialist approach, the potential for mismatch (i.e. lack of alignment between the different components of the curriculum) is great because each different group of people performs different curricular functions, uses different discourses, and produces different curricular products.

Q. Define Objectives Model.

Reconstructionism's main purpose of education is to bring about some kind of social change. Its origins lie in the movement for scientific management of education and the work of behavioral psychologists in the first half of the twentieth century, who defined learning as a process of observable changes in behavior which could be measured.

Q. Define the use of materials in learning?

No matter what form of materials teachers make use of, whether they teach from textbooks, institutional materials, or teacher-prepared materials, the materials represent plans for teaching. They do not represent the process of teaching itself. As teachers use materials, they adapt and

transform them to suit the needs of particular groups of learners and their own teaching styles. These processes of transformation are at the heart of teaching and enable good teachers to create effective lessons out of the resources they make use of. It is useful, therefore, to collect information on how teachers use course books and other teaching materials in their teaching.

Q. How do training contribute to the teachers' cognition and professional development?

One of the factors that can contribute to teacher cognition is professional development, and it is through professional development opportunities that change is often introduced to teachers. As teacher cognition is not static, changing beliefs is possible. Both pre-service and in-service training are intended to introduce change. It is important, therefore, to recognize that participants arrive at both forms of training with pre-existing beliefs. Trainee teachers who enter a pre-service course already have well-developed ideas about teaching based on their experiences as learners. Practicing teachers who attend an in-service course arrive with well-developed ideas based on their experiences as teachers and their understanding developed through their own pre-service training as well as beliefs based on experiences as learners.

Q. Define "Task"

A usually assigned piece of work often to be finished within a certain time

Q. What is process model. Define it in 2-3 lines

The purpose of education from the point of view of the process model is to enable the individual to progress towards self-fulfillment. It is concerned with the development of understanding learning process, and not just the passive reception of knowledge or the acquisition of specific skill.

The goals of education are not defined in terms of particular ends or products, but in terms of the process and procedures by which the individual develops understanding and awareness and creates possibilities for future learning. Content is based on principles derived from research into learning development, and the overall purpose of the educational process is to formulate the objectives related to the procedural principles.

Q. Tyler's model

The model is linear in nature, starting from objectives and ending with evaluation. In this model, evaluation is terminal. It is important to note that:

- ❖ Objectives form the basis for the selection and organisation of learning experiences.
- ❖ Objectives form the basis for assessing the curriculum.
- ❖ Objectives are derived from the learner, contemporary life and subject specialist.
- ❖ Evaluation is a process by which one matches the initial expectation with the outcomes.

Q. Three types of changes when speaker maintain the interest during presentation?

The teacher uses different techniques than those used in the book. For example a 4/3/2 fluency activity is used to practise some of the dialogues. The activity involves the students usually to be paired with one half as listeners and the other half as speakers. It involves three rounds. In the first round the speaker is given four minutes to talk about the given subject. Then after a short pause where the listeners are changed the speakers talk again on the same subject for three minutes. In the third round the procedure is repeated and the speaker is given two minutes to talk again about the same subject.

Q. Explain content Model?

The central focus of the curriculum in this model is the content of what is to be learned by, or transmitted to the learner. In the Classical Humanist tradition, the content is a valued cultural heritage, the understanding of which contributes to the overall intellectual development of the learner and from the point of view of epistemological objectivism. The content is knowledge which has been identified and agreed to be universal, unchanging and absolute. This model has been the dominant philosophy underlying the history of the Western educational system for centuries, derived from theories of knowledge going back to Aristotle and Plato.

5. How material suggest for the learning of calssroom role?

The crucial factor is thus not only how learners interpret what is provided in the materials, but also what actually happens in a particular classroom. Nevertheless, since the construction of teaching materials is a deliberate attempt to bring about certain kinds of interaction in the classroom, we believe it is important to consider materials in terms of what they may suggest for the learning of classroom roles.

Q. Basic of Mastery Decisions in Program Evaluation and what do they analyze?

A very important factor in evaluating a language program is that it can be assessed through students' performance. The success or the failure of the program can be measured through students' achievement. Students' performance is the reality of the language classroom procedures. The aspect of students' performance cannot be overlooked while evaluating a language program. The mastery decisions in an evaluation are based on how students are performing like students have reached the required competence level or failed to achieve or are underperforming.

Q. What is status of critical thinking in the context of Pakistani Educational tonal Syst system

First, reading skills are hugely emphasized in Pakistani main stream educational system. Students are encouraged to read and produce writing based on their reading experience. Therefore, reading becomes a vital skill in the learning process and students hugely depend on

this skill to grasp the learning materials. Secondly, though situation has changed in private educational institutes, Pakistani mainstream educational system still severely lacks critical thinking because of conservative teaching and learning methodologies in classroom.

Q. Define Accountability?

In both formal and business sectors, the model provides clear methods for needs identification, establishing learning purpose and providing measurable —products of the educational programme.

Q. Define Hidden Curriculum

The idea of a ‘hidden curriculum’ was originally introduced in contrast with the ‘formal curriculum’ by Jackson (1986) to draw attention to the fact that schools do more than simply help transmission of knowledge between one generation and the next. Jackson (1986) refers a hidden curriculum to learning outcomes apart from those intended in the ‘manifest curriculum’.

(105 Marks) Questions

Q. Five goals of an effective workshop

- ❖ Understanding and remembering new ideas
- ❖ Experiencing and evaluating exercises
- ❖ Producing material or exercises,
- ❖ Planning units of work,
- ❖ Problem solving

Q. Stages of change

1. Make sure that the change is really needed
2. Plan the type of change so that it is not too great and not too small
3. Make sure that enough people see that the kind of change is possible
4. Use a wide range of change strategies
5. Be prepared for the change to take a long time

Q. Validity of test

A valid test measures what it is supposed to measure. A valid achievement test measures what has been learned on the course. A valid listening test measures skill at listening. The most practical ways for a teacher or curriculum designer to check the validity of a test are to look at its face validity and content validity. Face validity simply means that if the test is called a reading test, does it look like a reading test? If it is called a vocabulary test, does it look like a vocabulary test? There is nothing very scientific about deciding on face validity, but face validity is

important because it reflects how the learners and perhaps their parents, and other teachers will react to the test. For example the Eurocentric Vocabulary test presents words in isolation without a context. It does not ask for the learner to give a meaning, and it does not require the learners to use the vocabulary. This could affect learners' reaction to the test and their acceptance of its results. Similarly a test of speaking which does not require the learners to speak (Brown, 1983) has low face validity. A deeper understanding of how these two tests work and how they have been validated shows that these are valid tests, but their face validity, their appearance of being a certain kind of test, is still low. It is an advantage if tests look like the kind of test they are supposed to be.

Q. standard through benchmark

Standard 1

All students will search for, discover and understand a variety of text types through tasks which require multiple reading and thinking strategies for comprehension, fluency and enjoyment.

Benchmark I: Evaluate patterns of text organization, and function of various devices used within and beyond a paragraph in a text.

Benchmark II: Analyze, synthesize and evaluate events, issues, ideas and viewpoints, applying reading comprehension and thinking strategies.

Benchmark III: Analyze and synthesize information from a visual cue or a graphic organizer to summarize while highlighting the key areas and main trends.

Benchmark IV: Gather, analyze, evaluate and synthesize information to use for variety of purposes including a research project using various aids and study skills.

Standard 2

All students will read and analyze literary text to seek information, ideas, enjoyment, and to relate their own experiences to those of common humanity as depicted in literature.

Benchmark I: Analyze and evaluate short stories, poems, essays and one-act plays; relate how texts affect their lives and connect the texts to contemporary / historical ideas and issues across cultures

Q. Five steps of Layers of Necessity Approach. (MAY BE)

- 1) Requirement analysis
- 2) System design
- 3) Implementation
- 4) Testing
- 5) Development

6) Maintenance

Q. Illuminative Evaluation.

Another type of evaluation can be described as illuminative evaluation. This refers to evaluation that seeks to find out how different aspects of the program work or are being implemented. It seeks to provide a deeper understanding of the processes of teaching and learning that occur in the program, without necessarily seeking to change the course in any way as a result.

Example: A teacher is teaching a course on reading skills and has developed a course which focuses on a wide variety of reading skills, such as skimming, scanning, reading for details, surveying a text, critical reading and vocabulary development. All of the skills receive regular focus throughout the course. The teacher is interested in finding out what the students perceive to be the main point of the course. Students complete a short questionnaire at different times during the course in order to describe their perceptions of what the course is seeking to achieve. At times there is a different perception on the part of students as to the purpose of different activities, or even of whole lessons. After reflecting on this phenomenon, the teacher comes to understand that learners' perceptions of a course may reflect what they are most interested in or what they feel they need most help with at a particular point in time.

Q. Observation of learning

Monitoring learners' progress in a course can occur at the level of the learning activity. This monitoring does not assess the learners but is directed towards the tasks that they do. The purpose of the monitoring is to see if it is necessary to make changes to the learning activities in order to encourage learning. For example, in a spoken fluency development activity, the following learning conditions need to occur. The learners are focused on the meaning of the task. The task involves very limited language demands, i.e. all the language needed to do the task is familiar to the learners. There is some kind of pressure to perform at a higher than normal level of performance. The signs that the teacher should look for when monitoring the activity are an involvement in communicating with a partner, a reasonably high speed of speaking with a small number of hesitations, and some signs of comprehension by the listener. The design features include opportunity for preparation, a chance to repeat the task several times to different listeners, a familiar topic and an involved listener, and time pressure. Monitoring can occur in other ways. Learner diaries or logbooks written for the teacher are a useful source of information (Savage and Whisenand, 1993). Learners' talking, in small groups to provide feedback for the teacher, is another way.

Q. A focused opportunistic approach.

In a focused opportunistic approach, the format and presentation part of the curriculum design process is typically done first. That is, material is gathered or prepared to teach the course. Then, with each re-teaching of the course, one part of the curriculum design process is done thoroughly.

Thus, it might be that a proper needs analysis is not carried out until the third or fourth re-teaching of the course. Tessmer and Richey (1997) warn against this approach, mainly from the point of view of efficiency in that working thoroughly on one aspect of curriculum design may result in wasted effort because the findings may not be able to be used in the other less-elaborated parts of the curriculum design process. The attractiveness of this model is that it allows a concentrated focus with possible high-quality improvements in a course. For example, if during one presentation of a course, assessment was focused on or there was a careful needs analysis done, then the improvements could be done well

Q. negotiating Assessment

Several of the reports focus on negotiation of assessment and evaluation, largely because this has direct effects on goals and ways of achieving these goals. Breen and Littlejohn (2000) point out that there are four major factors affecting feedback through assessment:

- ❖ The extent to which students are aware of the criteria being used.
- ❖ The relative emphasis given to what they have achieved as compared with what they have failed to achieve.
- ❖ The coincidence between what the feedback focuses upon and what the students themselves have recognised as particularly difficult for them.
- ❖ Whether or not they believe they can act on the basis of the feedback in a way that solves a recognised problem.

This is a very insightful list and the teacher needs to keep these factors in mind when negotiating assessment. Smith (2000) describes a very effective way of negotiating assessment. The assessment is seen as including not only the results of tests and assigned tasks, but also participation in class, homework, and class projects

The idea of a negotiated syllabus raises questions about the role of the teacher and the role of the commercially produced text book (Richards, 1993).

Q. What is the role of learner in programe implementation?

Curriculum implementation involves the dissemination of the structured set of learning experiences, provision of resources to effectively execute the plan, and the actual execution in the classroom setting where teacher-learner interactions take place.

Therefore, curriculum implementation is that stage of the curriculum process where the learner, through the guidance of a teacher, interacts with a variety of learning experiences so as to make learning process fruitful. Hence, both the learner and the teacher bear a reasonable amount of responsibility during curriculum implementation and program management. The learners are critical element in the entire process of curriculum implementation, since learners hold the key to

what is actually being translated and adopted from the official designed curriculum that is meant for them.

Learners influence the teacher in the selection of learning experiences because the school consists of many levels and class grades, calling upon the teacher to prepare for the disparities among the learners, for instance, individual differences between the slow learners and the quick learners. Therefore, a teacher selects the suitable learning methods and teaching aids to suit each category of learners.

The learner plays the role of exhibiting desirable discipline, both in and outside the classroom, through maximum obedience to the school rules and regulation and attending the classwork and the entire school program. For example, doing all assignments, tests and examinations yield into some level of desirable learning. For the implementation of curriculum to be effectively done, the learner should be physically, mentally and emotionally available to the teacher for instruction, so that the planned program can be implemented.

Q. 5 merits of skill-based syllabus.

- ❖ They focus on behaviour or performance.
- ❖ They teach skills that can transfer to many other situations.
- ❖ They identify teachable and learnable units.
- ❖ Skills-based syllabuses have the advantage of focusing on performance in relation to specific tasks and therefore provide a practical framework for designing courses and teaching materials.
- ❖ Krahanke thinks that (1987) skill-based content is most useful when learners need to master specific types of language uses, either exclusively or as part of broader competency.

Q. Learner centered design discuss in detail.

The concept of learner-centeredness has been invoked with increasing frequency in recent years. The philosophy of learner-centeredness has strong links with experiential learning, humanistic psychology and task-based language teaching. This approach places the learner at the center of the pedagogic process and sees education not as a matter of receiving information but of intelligent inquiry and thought (Gibbons, 2002).

A learner-centered curriculum will contain similar elements to those contained in traditional curriculum development, that is, planning (including needs analysis, goal and objective setting), implementation (including methodology and material development) and evaluation. However, the main difference between learner centered and traditional curriculum development is that in the former the curriculum is a collaborative effort between teachers and learners. Therefore, learners need to be systematically taught in order to implement a learner- centered approach to

pedagogy. In other words, language programs should have dual goals: language content goals and learning process goals.

Learner-centered curriculum will allow students to participate more fully in the arrangement of their own learning experiences in such a way that two key objectives are realized. One, students will participate in the shaping of curriculum thereby addressing the imperatives of many contextual issues that include a new situational/personal culture. Two, student involvement is arranged so that students engage in meta-learning i.e. providing them the opportunity to learn about design and construction of purposeful learning activities.

Q. significance of need analysis within the backward design of curriculum.

Needs Analysis (identifying learning outcomes or objectives) is often seen to depend upon a systematic analysis of the learners' communicative needs. It emerged in the 1960s as a part of the systems approach to curriculum development – an aspect of the prevalent philosophy of educational accountability from which the use of objectives was also derived (Stufflebeam, 1985).

Informal needs assessment deals with the informal negotiation that takes place between class teachers and students in the form of chats with either individual students, groups of students or the whole class in order to select a focus for the class. It is a necessary component of information retrieval on students' learning needs and should be recorded. It can subsequently be used as input for aims and objective setting and for devising course outlines (Shaw and Dowsett, 1986).

The steps involved are:

- ❖ Identify learner's communicative needs.
- ❖ Develop statements of learning objectives.
- ❖ Identify linguistic content and skills needed to attain the objectives.
- ❖ Prepare course plans.
- ❖ Select materials and teaching methods.

Q. necessity layers steps

- ❖ Decide on the most severe environmental constraint on the course and how it will affect the curriculum design.
- ❖ Decide on the most urgent necessity that learners have to meet at the end of the course.
- ❖ Make a short list of items to cover.
- ❖ Decide on a simple lesson format that will make use of available material.
- ❖ Gather the material for the course.
- ❖ Decide on a simple form of assessment
