1. The magnifying power of the microscope is its combined power of ocular_ of the microscope lens.

Answer: Objective

2. What is the function of the objective lens in a light microscope?

Answer: To magnify the image of specimen.

3. _ is used to control the amount of light passing through the specimen?

Answer: Condenser

4. In gram staining of bacteria_ is used as a mordant.

Answer: Iodine

5. Safranin is used to stain_?

Answer: Gram negative bacteria

6. Gram bacteria is classified on the basis of differences in _ structure and composition.

Answer: Cell wall

7. Gram positive bacteria is stained with_?

Answer: Crystal violet

8. Which of the following is not a characteristic of prokaryotic cells?

Answer: Membrane-bound organelles

9. Which of the following is not a type of prokaryotic cells?

Answer: Fungi

10. Prokaryotic cells can reproduce by?

Answer: Binary fission

11. Prokaryotes are classified as?

Answer: Unicellular organisms

12. Eukaryotic cells can be found in?

Answer: All of them

13. Which of the following is not a type of eukaryotic cell?

Answer: Bacterial cell

14. Plant cells obtain energy through?

Answer: Photosynthesis

15. Which of the following organelles is responsible for photosynthesis in plant cells?

Answer: Chloroplasts

16. Which of the following is a characteristic of a plant cell?

Answer: Presence of cell wall

17. Which organelle is known as the powerhouse of the cell?

Answer: Mitochondria

18. Which of the following is present in an animal cell?

Answer: Vacuole

19. Animal cells obtain energy through?

Answer: Cellular respiration

20. Which of the following organelles is responsible for protein synthesis in animal cells?

Answer: Ribosomes
